CS 490 - Web and Mobile Programming

ICP2 Documentation

For the approach of this ICP, I decided to make a biography like page about myself. This allowed me to put into practice all the skills taught in class. The main aspect of the page was a paragraph of my degree choice and my passion for technology. To the right of the paragraph is an image of myself. I managed to add it to the right of the page by making the body of the page a flex and using float to shift it to the right. The image is also clickable and will open a new tab.

The rest of the page is a combination of two lists, one that is an unsorted one that displays my hobbies, and another that is a sorted one that shows my top 3 movies. We were also entrusted to add a relevant video to the page, and I decided to add a cute one, no relation at all. The video had all the functions of a normal YouTube video.

Sample of the website.

Unlike the last ICP, in this one I used a combination of both HTML and CSS. Both are languages that I have no experience with whatsoever. This was a great learning experience, and despite having no prior knowledge I think I did pretty great.
